

FIRE!

As a business owner or manager, you know that fire prevention and protection are two critical responsibilities. Keeping your employees and your business safe from fire hazards is not only important but also the law!

Your local and state fire code, OSHA, CDLE, WLSD, MSHA, DOT and your insurance carrier, all specify that your business must not only be protected with appropriate fire extinguishers but they are to be inspected annually by a certified technician and serviced at appropriate intervals.

If you have a kitchen hood or industrial fire suppression system for a paint booth, they are to be inspected and serviced twice a year by a **CERTIFIED** technician.

Laramie Fire Extinguisher Services now offers inspection and servicing of **all** brands of kitchen hood fire suppression systems and dry chemical industrial fire suppression systems.

We are also a factory authorized dealer that sells and installs American made, **AMEREX** brand fire suppression systems and extinguishers.

Need extinguisher training for your employees? **Laramie Fire Extinguisher Services** offers **hands-on** training. You and your employees will learn about different fire extinguishers and their uses. Each participant will put out a fire with an extinguisher.

Business Of The Month, November, 2013

OUR COMMITMENT TO YOU!

Laramie, WY 82070-4250

DO YOU KNOW?

Where the fire extinguishers in your business or home are? Are they located where they can be reached if there is a fire?

Do your employees and family members know where the extinguishers are and how to use them properly?

FIRE EXTINGUISHER FACTS

Fire extinguishers are to be inspected monthly by the business owner or a designated employee.

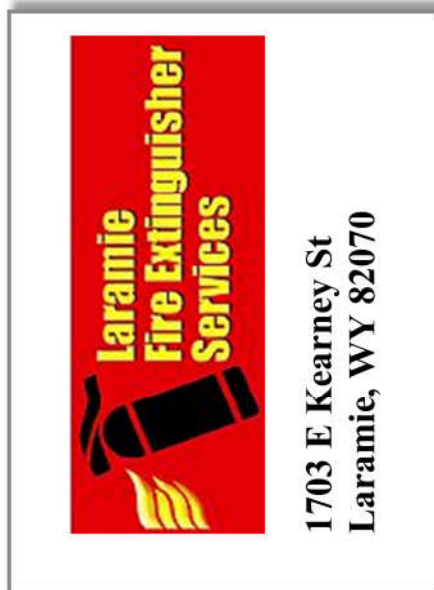

Fire extinguishers are to be inspected every year by a **certified** person?

Dry chemical extinguishers are to be serviced every 6 years. This means emptying out the extinguisher, inspecting the interior and powder, cleaning the valves and recharging the unit.

Every 12 years, dry chemical extinguishers are to be hydro-tested to ensure the integrity of the cylinder.

Liquid or wet chemical extinguishers are to be serviced every 5 years and recharged with new chemical.

According to the National Fire Protection Association Manual 10 (NFPA 10 for portable fire extinguishers), any dry chemical extinguisher manufactured 1984 or before is to be taken out of service and no longer used to protect commercial property.

KITCHEN HOOD SYSTEM FACTS

Kitchen hood and industrial systems are to be inspected and serviced at least every six months.

The wet chemical cylinder in a kitchen system is to be hydro-tested and recharged every 12 years.

The dry chemical cylinder in an industrial system is treated like a portable extinguisher with service intervals of 6 and 12 years.
